

DynoWeb Offer

Status: Canonical offer. How we package and sell DynoWeb to a merchant — the positioning line, the entry offer, the pricing logic, and the objection kill. Every ad CTA, listing pitch, and outreach close should resolve to this. Pairs with [dynoweb-icp.md](#) (who), [dynoweb-vocabulary.md](#) (words), [competitor-wounds.md](#) (why we win), and [dynoweb-distribution-plan.md](#) (how we reach them).

Built: 2026-07-17 · **Grounded in:** the ICP, live competitor 1–3★ reviews, docs/DYNOWEB_FEATURES.md, and philosophy.md (P1 act, P3 show-the-money, P5 trust, P8 honesty).

This is a proposal until a paying stranger validates it (see the plan's 2-week test). Treat the numbers as starting points, not settled facts.

0 · The one reframe the whole offer rests on

Stop selling a \$14 tool. Start selling a recovered sale — and gate the money on proof.

The buyer (see ICP) is a broke, overwhelmed solo store owner who's been burned by apps, ads, and advice, and is scared to spend again. They don't want a dashboard to operate. They want the leak found and fixed. So the offer is **done-for-them and outcome-gated**: we find the leak free, deploy the fix, they watch it work, and they only pay once it's made them money.

This reframe fits the buyer's real state *and* is the path off the two ceilings the honest read named: the free-tool knife fight (Clarity is free) and the ~\$209k self-serve ARR ceiling.

1 · Positioning statement

"We help Shopify store owners who get real traffic but not enough sales recover the money leaking out of their store — without a \$5k agency, a six-week report, or touching a line of code."

What is deliberately **absent**: "CRO", "heatmaps", "AI platform", "analytics". The buyer doesn't search those and doesn't want a tool. Lead with the money; name the three fears (cost, delay, tech).

2 · The core outcome we sell

Money made — recovered lost sales — with the anxiety of "I don't know what's wrong and I'm bleeding money" removed. Everything else (heatmaps, replays, the AI, the report) is *evidence*, not the product. The line the buyer repeats: *"they found \$4,000/month I was losing at checkout and fixed it."*

Priority of outcomes: **money made** → **risk removed** → **time saved**. Never lead with time saved — for a store owner in debt, money and fear beat convenience.

3 · Making ROI undeniable (three proofs)

- 1 **A dollar figure on the leak, before we ask for anything.** The CRO Report's revenue-leak estimate — *"you're losing ~\$3,200–\$5,800/month at the shipping step"* — computed on *their* store. Converts vague dread ("what am I doing wrong?") into a specific, quantified, fixable problem. This is the free hook.

- 2 **Recovered dollars, net, per fix.** SmartNudge attribution — *"this cart-saver recovered \$1,400 last month"* — the app visibly paying for itself. Against \$14–29/mo, ROI is arithmetic they watch happen. Net of refunds, never gross (philosophy P8).
- 3 **They watch the before/after in a replay.** Deploy one fix, show the session recordings of shoppers who used to abandon and now don't. The **honest** proof (replay + attribution) — never a fabricated "we A/B-tested a 20% lift"; our market can't power that test and a savvy merchant catches the lie (P8). Watching a recovered checkout beats any stat.

4 · The entry offer (makes the first yes trivial)

The Free Leak Report + First Fix Free

"We'll show you the single biggest reason you're losing sales — free. Then we deploy the fix for you and you watch it work. You only pay to keep it running once it's actually made you money."

Why it's right for THIS buyer: - **Zero money risk** — what a broke, burned merchant needs to hear first. -

Done-for-them, not DIY — no dev, no time; "we deploy it" beats "here are tools". - **Outcome-gated** — payment triggers *after* attributed recovery. This one mechanic dissolves the #1 objection (\$6).

Mechanics: free CRO report → deploy their #1 fix (usually a cart/exit SmartNudge) free for 14–30 days → attribution shows recovered sales → they convert to keep it live. Recovers nothing → they owe nothing, and you've spent ~an hour.

■■ **Operational cost, stated plainly:** for early customers *you* (or a VA) hand-deploy the first fix. That doesn't scale to thousands — but with zero paying strangers today, hand-deploying the first 20–50 to *prove the motion converts* is exactly right. Automate it once it works, not before.

5 · Pricing — two layers, and the logic

Layer 1 — self-serve, keep as-is: Free \$0 · Growth \$14 · Pro \$29. The logic isn't "charge more" — **price was never the barrier**. At a recovered \$1–4k/mo, \$14–29 is a 50–150× return. The tiers already sit right against the detectability floor (Growth's 7,500 sessions = the ICP band). The pricing *job* is to make the first recovered dollar **visible**, not to raise the number. Trust and proof are the constraint, not price.

Layer 2 — the real money: done-for-you / managed at ~\$99–\$299/mo. Where value-pricing actually applies and where we break the ~\$209k self-serve ceiling. If we recover \$2–4k/mo *for* them, **\$149/mo is a fraction of the value and a no-brainer** — and it's a price a merchant *expects* to pay for "you handle it," vs. the \$14 they expect for "a tool I run myself." Same product underneath; we're selling the *deployment + monitoring*, which is what an overwhelmed owner actually wants to buy.

Suggested launch: done-for-you at **\$149/mo, first cohort capped at 10–15**. Straight talk: the \$14 self-serve is a real but small business; the \$149 DFY is how this offer becomes worth real money — and it fits the buyer *better*, because they don't want a dashboard, they want the problem gone.

6 · The #1 objection, killed head-on

The objection (grounded in the review data + our zero-paying reality):

"I've already tried apps, ads, and advice — nothing worked, and I'm not spending more money on something that probably won't either."

Three stacked fears — financial (in debt), burn (prior tools failed: "took thousands of dollars," "money hungry," "use at your own risk" — real competitor reviews), and trust (surprise-billed before). Don't argue. Disarm all three in the offer itself:

- **Financial fear** → outcome-gated pricing: *"You don't pay a cent until you've watched it recover a sale."* Can't lose money on something you only pay for after it makes you money.
- **Prior-burn** → done-for-them + watched proof: *"You're not buying a promise — you're paying for a result you already saw in the replay."*
- **Trust/billing scar** → say the competitor wound out loud: *"Honest billing. No surprise charges, ever. Bots never count. And you approve every change — nothing happens to your store behind your back."* (that last clause also kills the AI-distrust wound — *"AI hallucinates and corrupts my store"*).

The closing line: *"You've been burned, so I've built the offer so you literally cannot be burned again — you approve everything, and you don't pay until it's already made you money."*

7 · How to use this

- **Ad / listing CTA?** Resolve to the §4 entry offer ("Free Leak Report + First Fix Free"), not "Install now" or "Start free trial."
- **Outreach close?** Lead with the §3.1 dollar figure, offer §4, pre-empt with §6.
- **Pricing page / sales convo?** §5 — anchor the DFY tier on recovered dollars, not features.
- **Every claim** obeys philosophy P8: replay + attribution, net dollars, never a fabricated lift.
